

THE FOURTH GROVER CONFERENCE

THE DIAGNOSIS AND TREATMENT OF  
PULMONARY HYPERTENSION

September 12-16, 1990

I personally thought that the Grover Conference was outstanding. There really was a great sense of "intellectual honesty" among the participants discussing their differences in interpretation and methodology and it really was a "unique" series of presentations and discussions.

I found the meeting to be very stimulating and informative, and the location and format of the meeting were outstanding. I came away from the meeting inspired to tackle the problem of early diagnosis of PH in scleroderma, and I hope to collaborate with John Catravas, whom I would not have met if you had not invited us both to Colorado.

Thank you again for an absolutely splendid meeting. I cannot say more than this was probably the most memorable conference that I have been to.

The Fourth Grover Conference was terrific. The presentations were on the money and the discussions, both in and out of the conference room, were provocative. The informal relaxed atmosphere helped to make the hard work even more fun than usual.

I thoroughly enjoyed the meetings and, like most others, I came away with many new ideas for future research projects. As you must have realized 8 years ago, Lost Valley Ranch is the ideal setting for a conference

Thank you again for your invitation to participate in the Grover Conference. I had a lovely time and thoroughly enjoyed myself - professionally and socially.

Thank you for including me as a speaker. I learned a lot during the lectures, but perhaps even more at the many informal gatherings

I would like to congratulate you and Jack on once again putting together an outstanding conference which was thoroughly enjoyable and stimulating.

It was my pleasure to meet you and Jack Reeves at the Grover Conference recently. I appreciate the opportunity to participate in such a rewarding and energizing meeting. I do thank you and Dr. Reeves for the opportunity to not only participate in the meeting but to gain so many new colleagues.

I found this to be a highly stimulating and provocative meeting, and I learned a tremendous amount about the state of the art of current research in pulmonary circulation.
